

Hi!

I'm having two questions regarding the type of a question. It's a bit complicated since I can't find the appropriate type for my question to put it into life. Anyway, attached is an example of questions I would like to create (please be aware that the content was quickly created for the purposes of this chat, in the reality it isn't so silly as it may look like).

### 1. Question

Here I would like to combine a multiple choice question (with the option other) and matrix type of a question. However, dual scale doesn't work here, since I'm having three different groups instead of two.

	Vegan dinner	Classical dinner	Lactose-free dinner
Master students	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Phd students	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Professors	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Other (who)	(Text field)	(Text field)	(Text field)

### 2. Question

I need a question where the percentage of participation (for example) can be given as well participants may answer "not applicable".

Please specify in percent	(number field)
not applicable	<input type="radio"/>

Can you please give me some advice how this can be sorted out? I would be very much grateful.

Thanks a lot in advance!

Greetings

Katja
